STABILITY

LIGHT

The pavilion features a single STROHBOiD wooden lightweight construction as a standard.

Ultimate load	2.000 kg
Snow load	20 kg/m ²
Wind load	100 - 140 km/h**

STRONG (Add-On)

The pavilion can be extended with a double STROHBOiD wooden structure for more resistance .

Ultimate load	10.000 kg
Snow load	150 - 200 kg/m ²
Wind load	140 - 170 km/h**

FUNDAMENT

PERMANENT USE

Can be anchored to the ground as a permanent outdoor solution. A leveled gravel surface is required, so our assembly team can set up the pavilion.

TEMPORARY USE

Can be installed as a temporary outdoor solution on concrete slabs. A leveled gravel surface is required, so our assembly team can set up the pavilion.

**By default, the pavilion is calculated for wind peaks up to 140 km/h. For locations with higher wind speeds, the ballasting can be increased and the statics calculated for the location. Thus wind peaks up to 170 km/h are possible.

More details about the Glamping unit can be found on our website
